

Team BeautifulSoup  
Meeting 10  
Monday, 4/23/18

### **Attendance**

- Nick
- Obi
- Kishan

### **Absent**

- Yooil

### **Accomplishments (last week)**

- Nick
  - Create second half of low-tech presentation
  - Administer second half of low-tech presentation
- Kishan
  - Create first half of low-tech presentation
  - Administer second half of low-tech presentation
  - Fixed minor array issue
- Obi
  - Create non-technical project presentation
  - Administer non-technical project presentation
- Yooil
  - Fixed minor text display issue on front end (Merge #53)
- All
  - Attended 115 lab session

### **Things to Do & Assignments (spans multiple pages below)**

Bugs		
Task	Assignment	Deadline
#55: play pause button don't toggle correctly <ul style="list-style-type: none"><li>• Fix player so hitting play button on a new song causes the old song's play button to display the play symbol instead of the pause symbol</li></ul>	Yooil	Wed, 4/25
#73: Image of album art is stretched out and ugly <ul style="list-style-type: none"><li>• Change dimensions of current album art display to smaller dimensions so image doesn't appear so pixelated and stretched</li></ul>	Yooil	Wed, 4/25

Database Population and Maintenance		
Task	Assignment	Deadline
<b>Implement database version of Spotify query algorithm*</b> <ul style="list-style-type: none"> <li>• Move query to Spotify to backend in express</li> <li>• Communicate processed data directly to database from backend to be executed on startup of database</li> <li>• <b>*Dependency alert: probability tables depend on existing and populated databases</b></li> </ul>	Kishan	Thurs, 4/26 @ 2:00pm

User-Facing Functionality		
Task	Assignment	Deadline
<b>Create like and dislike buttons that render next to each track*</b> <ul style="list-style-type: none"> <li>• Buttons must be React components that are rendered within the track component</li> <li>• Like buttons have an onClick method that signals that a specific trackID was marked <i>like</i></li> <li>• Dislike buttons have an onClick method that signals to backend that specific trackID should be marked <i>dislike</i></li> <li>• Ensure each button can only be clicked once (very important)</li> <li>• <b>*Dependency alert: playlist generation algorithm depends on functional like/dislike buttons</b></li> </ul>	Obi	Mon, 4/30 @ 11:30am
<b>Implement crowd-sourced solution to mood-mis-matched track generation (“track choice” algorithm)</b> <ul style="list-style-type: none"> <li>• Create probability table for each collection that will be updated as users click “like” and “dislike” for different tracks</li> <li>• Write back-end algorithm to randomly select tracks from a collection according to the probability values of each track <ul style="list-style-type: none"> <li>◦ Could create separate probability table for each collection or find way to easily store and access probability values within each track in each collection</li> </ul> </li> </ul>	Nick	Mon, 4/30 @ 11:30am
<b>Change mood button functionality to contact backend endpoint for a playlist, triggering backend “track choice algorithm”</b>	Nick	Mon, 4/30 @ 11:30am

Add-Ons		
Task	Assignment	Deadline
<b>Feature Request #67: Display message when hovered on a mood/song</b> <ul style="list-style-type: none"> <li>Link: <a href="https://github.com/kishanankara/beautifulSoup/issues/67">https://github.com/kishanankara/beautifulSoup/issues/67</a></li> </ul>	Yooil	Mon, 4/30 @ 11:30am

Looking Ahead: For Next Week		
Task	Assignment	Deadline
Change image art display so it randomly chooses		
Make database population functionality smarter <ul style="list-style-type: none"> <li>Re-queries Spotify to expand database collections on regular basis (example: once a day)</li> <li>Checks to make sure it does not add tracks that already exist in the database</li> </ul>		
Connect front-end like/dislike buttons to backend endpoint that modifies probability values in database collections		
Comb through final requirements to make sure we didn't miss anything <ul style="list-style-type: none"> <li>Requirements list: <a href="https://fury.cse.buffalo.edu/courses/cse442-s18/assignments/sprint6#section3">https://fury.cse.buffalo.edu/courses/cse442-s18/assignments/sprint6#section3</a></li> </ul>		
Test app on Heroku to confirm all functionality		
Make and publish YouTube video showing off final product		
Create final presentation
