

Team BeautifulSoup  
Meeting 9  
4/16/2018

### **Attendance**

- Nick LaGrassa
- 12:10:
- Kishan
- Obi

### **Absent**

- Yooil

### **Accomplishments since last week**

- Nick
  - Rewrote front end server code
  - Changed authentication so it's handled separately than mood button or login functionality
  - Figured out how to implement authentication with Spotify without exposing access token directly to user
  - Created TrackGenerator component to handle database track loading
- Kishan
  - Reverted Nick's front end server code
  - Reverted Nick's backend authentication code
  - Added "Welcome <username>" text display to Playlist
- Obi
  - Created and fleshed out landing page
- Yooil
  - Fixed our from-scratch player so that only one song would play at a time

### **This Week Tasks**

- Put together 5-10 minute non-technical presentation which needs: (Obi)
  - 1. Overview of our product
  - 2. Walkthrough of user stories
  - 3. Walkthrough of landing page and how to submit feedback
  - 4. Accessing the software (website url)
- Put together 30 min low-tech presentation which needs:
  - (Kishan)
    - 1. How react works
    - 2. How express works

- 3. How we got started with both
- 4. What a frontend does, what a backend does, and how they work together
- **(Nick)**
  - 4. What an API is and how we use the Spotify API to support our app
  - 5. What our next steps are: Database of tracks and increased complexity of algorithm
- **(Yooil)**
  - None

## Notes

- Format of presentation
  - PPT/Google Slides presentation
