

Team BeautifulSoup
Meeting 11
Monday, 4/30/18

Attendance

- Nick
- Obi
- Kishan

Absent

Yooil Suh

Accomplishments:

Nick - Implement crowd-sources solution to mood-mis-matched track generation (“track choice” algorithm)

- Created probability table for each collection that will be updated as users click “like and “dislike for different tracks.
- Wrote the back-end algorithm to randomly select tracks from a collection according to the probability table for each collection.
- Changed mood functionality to contact backend endpoint

Kishan - Implemented database version of Spotify query algorithm*

- Move query to Spotify to backend in express
- Communicate processed data directly to database from backend to be executed on startup of database

Obi - Attempted to implement the like/dislike button.

Yooil - No contact.

Tasks to Accomplish :

Nick - Make and publish YouTube video showing off final product
Change image art display so it randomly chooses

Kishan - Test app on Heroku to confirm all functionality and deploy

Obi - Display message when hovered on a mood/song.

Yooil - Coordinate with the team to fix front end issues regarding styling and CSS.
